Erosion & Sediment Control Notes:

1. All construction or earth-moving activity, and other activities that may result in erosion or sedimentation, shall be subject to erosion and sediment controls.
2. All disturbed areas subject to erosion or sedimentation, including those areas that are subject to offsite erosion or sedimentation, shall be subject to erosion and sediment controls.
3. All disturbed areas subject to erosion or sedimentation, including those areas that are subject to offsite erosion or sedimentation, shall be subject to erosion and sediment controls.
4. All disturbed areas subject to erosion or sedimentation, including those areas that are subject to offsite erosion or sedimentation, shall be subject to erosion and sediment controls.
5. All disturbed areas subject to erosion or sedimentation, including those areas that are subject to offsite erosion or sedimentation, shall be subject to erosion and sediment controls.

Anticipated Project Schedule:

1. Project Completion Date: September 30, 2018
2. Contract Start Date: October 1, 2018
3. Contract End Date: November 30, 2018
4. Contract Duration: 60 Working Days

Tree Protection Notes:

1. Tree ID Numbers, Tree Species, and Tree Identification shall be maintained for all trees on the site.
2. Tree ID Numbers, Tree Species, and Tree Identification shall be maintained for all trees on the site.
3. Tree ID Numbers, Tree Species, and Tree Identification shall be maintained for all trees on the site.
4. Tree ID Numbers, Tree Species, and Tree Identification shall be maintained for all trees on the site.
5. Tree ID Numbers, Tree Species, and Tree Identification shall be maintained for all trees on the site.

Synthetic Turf Protection Notes:

1. Synthetic turf shall be protected from damage due to construction activities.
2. Synthetic turf shall be protected from damage due to construction activities.
3. Synthetic turf shall be protected from damage due to construction activities.
4. Synthetic turf shall be protected from damage due to construction activities.
5. Synthetic turf shall be protected from damage due to construction activities.
General Conditions & Demolition Plan

Keynotes:

1. **Irrigation Plan**

Irrigation Notes:

1. The purpose of the irrigation plan is to outline the specific irrigation requirements for the Eagles High School track replacement project. The plan includes details on the installation of new irrigation systems, the location and design of existing irrigation systems, and the connection of new systems to existing infrastructure.

2. Prior to initiating any work on the irrigation system, a detailed inspection of the existing system shall be performed to ensure that all components are in good condition and functioning properly. Any repairs or replacements shall be made before the commencement of any new work.

3. All irrigation lines shall be laid out in accordance with the plans and specifications. Any deviations from the plans shall be documented and approved in writing by the project manager.

4. The irrigation system shall be designed to provide adequate coverage for all landscaped areas, including the playing fields and surrounding areas. The irrigation schedule shall be designed to ensure that all areas receive the appropriate amount of water for optimal growth.

5. The irrigation system shall be checked for leaks and repairs shall be made as necessary. Any leaks found in the system shall be repaired immediately to prevent water waste.

6. The irrigation system shall be tested regularly to ensure that it is functioning properly. Any malfunctions shall be documented and repaired immediately.

7. The irrigation system shall be maintained on an ongoing basis to ensure its continued operation. Any necessary repairs or replacements shall be performed as needed.

8. This plan is subject to change without notice. All changes shall be documented in writing and approved by the project manager.

9. The irrigation system shall be turned off during periods of inclement weather or during times when the playing fields are in use.

10. The irrigation system shall be turned on during periods of drought to ensure the continued growth of the landscapes.

11. The irrigation system shall be turned off during periods of heavy rainfall to prevent water waste.

12. The irrigation system shall be turned off during periods of low water pressure to prevent damage to the irrigation system.

13. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

14. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

15. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

16. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

17. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

18. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

19. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

20. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

21. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

22. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

23. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

24. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

25. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

26. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

27. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

28. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

29. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

30. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

31. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

32. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

33. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

34. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

35. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

36. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

37. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

38. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

39. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

40. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

41. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

42. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

43. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

44. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

45. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

46. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

47. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

48. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.

49. The irrigation system shall be turned on during periods of low water pressure to ensure the continued operation of the system.

50. The irrigation system shall be turned off during periods of low water pressure to ensure the continued operation of the system.
