Characteristics

One Characteristic is that the fossa has a monkey like tail and they also have a slim and skinny appearance. Also they have short dense brown hair. It has five pads and claws on its hind and front legs. The species name is ferox.

Fossa

By Thomas

Fun Facts

- The Fossa tail is about half the size of their body.
- The Fossa can have 3-4 pups
- The Male Fossa can grow 6-8 feet long Females can grow to be 4-6 feet long and male and female can be 3 feet tall and 50-300 pounds.

Human interactions

Yes the Fossa interacts with humans in the wild but its negative because we cut down the forest where the Fossa lives and raises young. They hunt their prey which are birds, fish, and other small creatures. People all over the world are saving young and injured adults and stopping loggers and other harming the forests.

Ecosystems

The Fossa lives in the rainforest of Madagascar.

Madagascar is a island off the coast of Africa. In Madagascar its rainy and mostly a rain forest. The interaction with other animals is low because the Fossa is one of ten predators in Madagascar and is the main predator of Madagascar. Its main interaction is with the other predators which they hunt and sometimes live together. An ecosystem is a group of living or nonliving organisms.

ADAPTATIONS

ONE ADAPTATION IS THAT THE FOSSA CAN CLIMB TREES REAL FAST SO CAN JUMP DOWN AND CATCH PREY.

ANOTHER ADAPTATION IS THAT THE FOSSA CAN BLEND INTO ROCKS. IT CAN ALSO HIND IN THE ROCKS TO HUNT AND RAISE YOUNG.
