

Human Interactions

The Bengal tiger is endangered because we kill the Bengal tiger for its fur and teeth. The people that kill the Bengal tigers are called poachers. It isn't only the Bengal tiger all the tiger species are either extinct or endangered. I want to save the endangered tigers because they are important because they eat wild boar, monkeys, deer, buffalo, and livestock. Sometimes if their really hungry they'll eat lizards, fish, crab, frog, and even berries. We humans interact with the tiger in good and bad ways.

LIONS AND TIGERS

***THE BENGAL
TIGER***

BY:DEVAN

Adaptations

Some adaptations of the tiger are the retinas because it allows the light to reflect back in to their eyes so it helps them see in the dark. They have long teeth and retractable claws both help them with hunting. They have great hearing and they can hear infrasound

Characteristics

The Bengal tiger has many characteristics. Like it's stripes no cat other than domestic cats has stripes. It is unique to them. Here's another characteristic some body parts are cream colored. Some tigers look like they have beards because their hair grows long and no ones around to cut it.. Now those are only some of the many characteristics of the tiger and all animals have scientific names. The Bengal tiger's name is *Panthera tigris*.

FUN FACTS

- ◆ The tiger is the biggest species in the cat family.
- ◆ Tigers can reach a length up to 3.3 meters (11 feet) and weigh as much as 300 kilograms (660 pounds).
- ◆ Subspecies of the tiger include the Sumatran tiger, Siberian tiger, Bengal tiger, South China tiger, Malayan tiger and the Indochinese tiger.
- ◆ A group of tigers is called a "ambush" or "streak".
- ◆ Tigers that breed with tigers give birth to

Ecosystem

An ecosystem is the natural habitat of a animal. The ecosystem of the tiger is very small because humans take their land to put houses on it . The tiger lives in the rainforest, but the Siberian tiger lives in the snowy mountains. The south china tigers live in only China and other tigers live in different ecosystems. The tiger interacts with other organisms by giving birth to the tiger or eating a different other
