

Solar System

By Dylan

Stars and our sun

STAR: IS ANY OF THE OBJECTS IN SPACE THAT ARE MADE OF BURNING GAS AND THAT LOOKS LIKE POINTS OF LIGHT IN THE NIGHT SKY. STARS ARE CLASSIFIED BY THERE SPECTRA AND THEIR TEMPERATURE AND THE ELEMENTS THAT THEY ABSORB. THEY ARE ALSO CLASSIFIED BY THERE SIZE BRIGHTNESS AND TEMPERATURE.

Inner planet

MARS

Mars is the 4th planet from the sun. It is red and there is lots of windstorms of dust. Also, some of Mars is VERY cold and some of it is VERY hot. Mars is known as the red planet the temp on mars is 80°F for our winter and for our summer it is -225°F for our summer. Mars is a rocky planet . Mars is 141,600,000 miles away from the sun. The main gas on mars is carbon dioxide.

Outer planet

Saturn

Saturn is the 6th planet from the sun it is VERY cold and has LOTS of rings and moons. The temp of Saturn is – 270°F. Saturn is a gas planet. Saturn is 890,700,000 miles away from the sun. the main gases on Saturn are hydrogen and helium.

Meteor and Comets

A comet is known as a “dirty snowball” that orbits the sun. A meteor is the light that goes into the atmosphere and goes into a shooting star. What is the difference from a meteor a meteorite and a meteoroid? A meteorite is a asteroid orbiting the sun. A meteorite survives the atmosphere and lands upon the Earth surface. They are different because a meteorite is something that hits the Earth a meteor almost hits the Earth but it burns in the atmosphere and is then a shooting star.

Gravity

Gravity is a force pulling together all matter which is anything you can physically touch. It impacts humans by keeping us alive. If gravity was not here than all the planets or humans would not be here. Our gravity on earth keeps us down but if we were to go to the Moon we would float away it would not be like that we would be flying all over the place and lose control and float away. Well gravity impacts the sun and planets by staying in the same place. For example, if like mars starts floating away then that means there was not much gravity. This will never happen. And if the sun was not even here then we would not be alive and the earth would just be REALLY COLD!

Technology

Technology is the stuff that is around us. Examples would be like computers, cars, phones, and smartphones etc. How technology benefits humans by playing games and doing work on computers and homework on computers. Two technologies that we use every day is phones and computers.
